DEVOPS FLIGHT PLAN

The DevOps Flight Plan creates a culture of collaboration and understanding between software development and business operations.

To fully benefit from DevOps, organizations must align their work culture with best practices. However, embracing DevOps and building a Continuous Delivery Pipeline can be a difficult journey for most companies. You may believe your plane is in good shape—but how do you gauge if your DevOps flight plan is on the right course? If you are starting, do you have a clear runway to launch your DevOps approach? If you are mid-flight, do you have the proper tools in your cockpit to ensure automation, continuous improvement, and the right monitoring? ClearlyAgile helps you create the cultural change needed to break down barriers between software development and business operations. With better communication and collaboration, it's easier to blend the tasks performed by the two organizations. ClearlyAgile helps you keep a focus on application lifecycle management and process efficiency to maximize business agility.

Clearing the path for your success.

DevOps Pre-Flight Checklist

How are you tracking the hidden costs of manual regression testing and human error?

What monitoring measures have you established to help predict the stability of your release?

How are you measuring your release confidence and improving your change failure rate?

How does your team test for security vulnerabilities?

What impact is your technical debt having on your client success metrics?
